Joshuah Gutierrez

Full-stack engineer looking for a Front-end position. A graduate of General Assembly with a history in Hospitality management that gives me unique project management insight, valuable to any engineering team. A highly motivated individual and eager to become an asset to any team.

Skills and tools

Front-end: HTML, CSS, Javascript, Jquery, Python, Node, React, Redux Sass, Styled-components
Back-end: Node-express, MongoDB, Mongoose, Python, Django, Postgres C, GO
Methodologies: Object Oriented Programming, MVC Pattern, REST-ful API, Big O
Deployment: Git, GitHub, Command Line, Heroku

Work Experience

Enki.Ai / Full Stack Developer June 2021- Now
Technologies Used: Javascript React Redux Sass
- I have full ownership of the project from design wireframe to full Proof of Concept.
- I have daily meetings, set my weekly sprints, and report directly to the CTO of the company.
- Using Enkis API i created a quick search page that will find information on the giving search request with as many modifiers as need. Then displays results organized within each title

Case studies/Concept Projects

Pokemon trading card game clone 03/2020 - 06/2020
Web based game / Solo Project
Technologies Used: HTML CSS Javascript Jquery
- Goal was to clone the PTCG playable by a user with a computer opponent
- The layout was all custom CSS showcasing CSS art replica of a Pokeball, and all logic for the game is written in Javascript, this encompasses the whole life-cycle of a round/game within a card game.

Poke-tracker 03/2020 - 06/2020
Full-Stack Pokedex / Team Project
Technologies Used: HTML CSS EJS express Mongoose MongoDB, Pokemon API
- Goal was to clone the Pokedex (Pokemon encyclopedia) and allow users to track Pokemon they have caught, and to provide item information from the game. The Data structure has 2 relationships allowing you to track different trainers collections in one account.
- A Pokemon API displayed all the information, All CSS along with CSS art is custom, and a database with MongoDB to track each users caught Pokemon
- This was a partner project. From the front end to the back, this project taught both of us how to manage a lot of information and how to talk out the solution with another dev.

Gayme-it 03/2020 - 06/2020
Reddit-clone / Solo-project
Technologies Used: Full-stack MERN app Mongo, Express, React, Node, CSS, Sass
- Goal was to create a Reddit clone focusing on Karma Voting
- Front end is build in React, Back end express api server, with MongoDB
