Joshuah Gutierrez

Objective

I am a Full-stack engineer looking for a Front-end position.

I am a recent graduate of General Assembly and when you add that to my history in Hospitality management it gives me unique project management insight valuable to any engineering team

I am looking for a company that can utilize my unique skill set and challenge me outside of my comfort zone

Skills and tools

Front-end: HTML, CSS, Javascript, Jquery, Python, Node, React

Back-end: Node-express, MongoDB, Mongoose, Python3, Django, Postgres C,

Methodologies: Object Oriented Programming, MVC Pattern, REST-ful API, Big O

Deployment: Git, GitHub, Command Line, Heroku

Case studies/Concept Projects

Pokemon trading card game clone

Web based game / Solo Project

Technologies Used: HTML CSS Javascript Jquery

The goal of the project was to make a web based video game. I took the Pokemon Trading Card game and created a clone using front end javascript.

Poke-tracker

Full-Stack Pokedex / Team Project

Technologies Used: HTML CSS EJS express Mongoose MongoDB, Pokemon API

The goal of the project was to make a full stack application with 2 data models. My partner and I built a Poke-dex that allowed registered to gather information and keep track of Pokemon collected over the course of 5 different games.

Gayme-it

Reddit-clone / Solo-project

Technologies Used: Full-stack MERN app Mongo, Express, React, Node, CSS

The goal of this project was to create a Reddit-clone, focusing on the implementation of karma voting. The Server for this React app was set up as an API.
